One Health approaches on the boundary between research and policies

Tuesday, 26 November | 14:00–17:45 CET

Wednesday, 27 November | 9:00–13:00 CET

Hybrid: Zoom and Malaysia room (B227), FAO headquarters

The Food and Agriculture Organization of the United Nations (FAO) and the Strategic Alliance of Catholic Research Universities (SACRU) invite you to a workshop on

One Health approaches on the boundary between research and policies.

Held on 26-27 November 2024 at FAO headquarters, in Rome, Italy, the event aims to foster collaboration among researchers, policymakers, and key stakeholders to address global challenges and explore opportunities for connecting research with policymaking under the One Health framework.

Scientific evidence increasingly highlights the links between environmental factors, food systems, and health risks such as antimicrobial resistance and food safety challenges. This workshop seeks to bridge these gaps by facilitating dialogue and promoting shared solutions across sectors.

Key focus areas:

- **Environmental health:** understanding the impacts of agrochemicals, pollutants, and regulatory differences on human health, agrifood systems, and the environment.
- **Food safety:** identifying and addressing emerging and newly identified food risks (NIER) through effective prevention and mitigation strategies.
- **Antimicrobial resistance (AMR):** examining the role of environments as reservoirs and foods as vectors of AMR bacteria and genes.

Featuring a hybrid format, the event will accommodate in-person participation at FAO headquarters and a global online audience, ensuring accessibility and inclusion. Engaging sessions, keynote speeches, and panel discussions will provide opportunities to share diverse perspectives and strategies.
